**LIQUID MUSCLE?**  
**IT'S NOT MAGIC,**  
**IT'S SCIENCE!**

# WHAT'S MEDIPHORM ULTRA?

IASP's Mediphorm Ultra is the ground-breaking next step in your site-enhancement journey! A crystal clear, advanced, high dalton weight, cross linked, ultrafiltered\* pharmaceutical grade hyaluronic acid injectable muscle filler .

When Big Pharma kicked off the beauty craze with injectable dermal fillers (e.g. Restylane®), the fitness and aesthetics industry quickly realized they could use the same technology to effectively and safely induce drastic results in muscle reshaping, figure sculpting, and overall size enhancement. Unlike previous-generation site-enhancement products that are oil-based, Mediphorm Ultra is a clear, water-soluble solution that disperses quickly and thoroughly in the muscle retaining the size and shape for up to 12 months\*\* Due to Mediphorm Ultra's composition and low risk profile, it's literally the best site-enhancement product on the market. Nothing else comes close.

**THE MOST ADVANCED, MOST POTENT,  
CRYSTAL CLEAR HA PRODUCT ON  
THE PLANET!**

# WHY IS IASP'S MEDIPHORM ULTRA THE BEST?

## 1. Microbial Fermentation

IASP achieves a high-molecular-weight HA via fermentation with the streptococcus zooepidemicus microbe. Fermentation occurs in a whey substrate which keeps costs reasonable. We use a combination of batch and fed-batch cultures to maximize HA yield.

## 2. Precipitation

Precipitation of HA from the fermentation product is achieved via isopropanol distillation.

## 3. Filtration

Filtration and initial separation are achieved via consecutive tangential microfiltration and then ultrafiltration through polyvinylidene fluoride membranes with cut-offs of 0.2 and 0.45  $\mu\text{m}$ .

## 4. Adsorption

3% charcoal and 1.5 % gamma alumina are used for adsorption. IASP does not use resins in this process.

## 5. Cross-linking

The high-weight HA product is then cross-linked into a hydrogel with Butanediol-diglycidyl ether (BDDE) in NaOH.

**The Result? Simple! Liquid muscle...**

# KEY BENEFITS

## Tweak Muscle Imbalances

Whether your left arm is just a bit smaller than your right, or you have unilateral nerve damage preventing you from training with the same intensity on each side, with Mediphorm Ultra it's No Problem.  
- Mediphorm Ultra works well in all muscles, and particularly shines in those hard-to-grow areas!

## Water-Based Solution

Mediphorm Ultra contains no oil, and is 100% water-soluble. Our easy dispersal formula contains a very special form of hyaluronic acid, which makes application simple, requiring fewer applications to get fantastic results compared to other site enhancement products.

## Promotes Healing

Mediphorm Ultra Promotes tissue healing, and is one of the best agents that can be used to recover from various kinds of injuries and joint pain.

## Skin Upgrades

Mediphorm Ultra can be applied topically! It's a fantastic moisturizer that can even be used to get rid of dark circles and uneven skin tones!

## Amazing Pumps

Redefine swole - Mediphorm Ultra draws an incredible amount of water into the muscle for amazing pumps.

# KEY BENEFITS

## Minimal Maintenance

Visible results within two weeks that last up to 12 months. Zero Side Effects and safe for both Male and females.

## Zero Side Effects

Safe for both Male and Females.

## No PCT Needed

Mediphorm Ultra doesn't affect hormone levels.

## All-Season Use

Can be used by athletes on both bulking and cutting cycles.

## Lasting Results

Entire point Last up to 12-16 months.

# FAQ

## Frequently Asked Questions

### 1 Are the results of using Mediphorm Ultra permanent?

It depends. While the size increase seen after injecting Mediphorm Ultra will be immediate, long-term muscle growth happens when the muscle fascia permanently stretches. This takes time. Repeated injections of Mediphorm Ultra coupled with pump-inducing workouts will allow you to maintain a larger size in these muscle groups long-term, provided you continue to exercise and eat.

### 2 Is Mediphorm Ultra safe to use? and how is it different from other site enhancement products, like Synthol?

Yes, it's 100% safe to use. Mediphorm Ultra contains highly concentrated human-grade hyaluronic acid, and is completely water-based. Mediphorm Ultra has none of the negative side effects that plague oil-based site enhancement products (e.g. synthol)

### 3 How long should I use Mediphorm Ultra?

We recommend running repeated injections into the same muscles for a period of 2 months, and then rotating to different muscles. While shorter cycles may give temporary results, we've found that 2 months allows the muscle fascia to adjust for more permanent growth.

### 4 Can I inject Mediphorm Ultra into all my muscles at the same time?

Bad idea. While the intramuscular water retention does stay within the muscle, it's still water retention. Your heart won't thank you for immediately retaining an additional 30 kilos of water. We recommend sticking to two muscle groups only for a 2-month duration, then you can switch it up.

## 5 What kind of workout protocol should I follow while using Mediphorm Ultra?

Targeted high-volume isolation exercises work best. Attempt to get the maximum pump during these workouts.

## 6 How long does it take to see the results from Mediphorm Ultra?

15-20 days after your first injection.

## 7 Do I need to run PCT after a Mediphorm Ultra cycle?

No, Mediphorm Ultra does not affect hormone levels.

## 8 How should I store Mediphorm Ultra?

Avoid heat and light. We recommend storing in a cool dark place between 15° - 25° Celsius (59° - 77° Fahrenheit).

## 9 How do I know if my Mediphorm Ultra is genuine?

Each bottle of Mediphorm contains a unique QR code. When scanned, it will display authenticity information, including how to verify this authenticity.

## 10 When should I use Mediphorm Ultra?

We recommend injecting 20-30 minutes before exercise.

## 11 How does Mediphorm Ultra help to repair injuries?

On a cellular level, Mediphorm promotes the uptake of nutrients via increased oxygenated blood flow in the applied area. When applied to the skin, it works as a really good moisturizer that can also help hide dark circles and scar marks.

## 12 How should I dose Mediphorm Ultra?

If you have never dosed Mediphorm before, please start small. We recommend testing a 1cc injection, and then observing how it behaves over the course of a week. Muscles that have routinely been injected into before will be able to accommodate more Mediphorm. Depending on the size of the target muscle, you may eventually be able to inject up to 3cc in it, though results would be better if you distributed 3x 1cc injections into different portions of the same muscle.

## 13 Can I use Mediphorm while running anabolics or peptide cycles?

Yes Mediphorm does not affect hormone levels. If anything, anabolics and peptides will be synergistic with Mediphorm. Particularly useful are myostatin inhibitors (e.g. YK-11).

## 14 Will there be any negative physical side effects when I stop using Mediphorm Ultra?

While Mediphorm Ultra does not affect hormone levels, you may lose some of the water-based size when discontinuing Mediphorm Ultra, though you will NOT regress any of the fascia stretching that occurred.

## 15 Is it painful to use Mediphorm?

Unlike some steroids which can cause immediate post-injection-pain, Mediphorm does not form a depot, and instead permeates into a larger area of the muscle. The presence of Mediphorm alone in your muscle will not cause an inflammatory/allergic response (pain). However, you will have some discomfort when you start to push your dosage up in order to stretch your muscle fascia. Use common sense, start small, and work your way up gradually!

# SAFE AND SECURE WITH **ZERO** SIDE EFFECTS

## 16 Does Mediphorm Ultra cause water retention under the skin?

If injected into muscle tissue, no. Mediphorm Ultra disperses throughout skeletal muscle tissue and is hygroscopic, meaning it will bind up to 1000x its weight in water. This water will stay in the muscle belly and help to stretch the muscle fascia.

## 17 Can I use Mediphorm Ultra during a cutting cycle?

Mediphorm Ultra is ideal for use during any type of cycle, and is especially effective when applied to someone with a very low body fat percentage. Remember - Mediphorm Ultra stays inside the muscle belly, so no loss of striation or vascularity will occur.

## 18 Can Mediphorm Ultra be used by females?

Yes. Mediphorm Ultra does not affect hormone levels.

## 19 How much does it cost?

Visit our website for prices: <https://go.iasp.is>.

## 20 Can I get results just by using Mediphorm Ultra by itself?

Yes - while anabolics and peptides may get you bigger faster when stacked with Mediphorm, they are by no means necessary.
